

Project No. 30-00999
Town of Buffalo Park Sprinkler System
Final Performance Report

Accomplishments

Completed work includes installation of a new irrigation system covering approximately six-and a-half acres of land. This system incorporates 23 irrigation zones. An irrigation system control was installed in an existing well house. The existing well was used to handle the water requirements. The surface of the ground was in good shape after the contractor left, so only a minimal amount of seeding and topsoil repair was needed. The irrigation system works very well and has made a tremendous improvement in the park.

The project was completed essentially in accordance with the project agreement.

Cost Information

Total Construction	\$281,923.23
Engineering & Architecture	\$37,973.24
Total Project Costs	\$319,896.47
State administration	\$20,800.00
Total	\$340,696.47
